J. Bacteriol. 175:4699-4711(1993).
J. FUNCTION: HMWC (high-molecular-weight cytochrome c), ORF2, ORF3,
ORF4, ORF5 and ORF6 in the HMC operon form a transmembrane protein complex that allows electron flow from the periplasmic hydrogenase to the cytoplasmic enzymes that catalyze reduction of sulfates.
J. SUBCELLULAR LOCATION: Integral membrane protein.

Sodium channel...;

FEBS Lett. 547:43-50(2003).

-I. FUNCTION: Insecticidal neurotoxin. Induces flaccid paralysis when injected introlegiopteran larvae. Is not toxic to mice when injected intracranially at 20 pmol/g.

-I. TISSUE SPECIFICITY: Expressed by the venom gland.

-I. TISSUE SPECIFICITY: Expressed by the venom gland.

-I. MASS SPECIROMETRY: MM=4940.3; METHOD=MALDI.

-I. MASS LD (50) is 17.6 mmol/kg to lepidopteran larvae.

TOXIN: Neurotoxin; Sodium channel inhibitor; Ionic channel inhibitor.

  "Distinct primary structures of the major peptide toxins from the venom of the spider Macrothele gigas that bind to sites 3 and 4 in the sodium channel.", FBBS Lett. 547:43-50(2003).
                                                                                     -!- FUNCTION: Insecticidal neurotoxin. Has no effect on lepidopteran larvae when injected at 20 pmol/g, or on mice when injected intracranially at 32.8 nmol/g, or on mice when injected intracranially at 32.8 nmol/g.
-!- SUBCELLULAR LOCATION: Secreted.
-!- TISSUE SPECIFICITY: Expressed by the venom gland.
-!- PTW: Contains three disulfide bonds.
-!- PTW: Contains three disulfide bonds.
-!- MASS SPECIRONERY: WW-4563.0; METHOD=MALDI.

Mecko iota-crystallin: how cellular retinol-binding protein became an eye lens ultraviolet filter.";

Proc. Natl. Acad. Sci. U.S.A. 97:3282-3287 (2000).

From Natl. Acad. Sci. U.S.A. 97:3282-3287 (2000).

-!-FUNCTION: BINDS VITAMIN A2 IN THE EYE LENS AND THUS FUNCTIONS AS A UV FILTER. INTRACELLULAR TRANSPORT OF RETINOL.

-I-SIMILARITY: Belongs to the fatty-acid binding protein (FABP)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Eukaryota, Metazoa, Chordata, Craniata, Vertebrata, Euteleostomi,

WPI; 2002-691521/74.

New isolated peptide that inhibits VEGP-C and VEGF-D, useful for diagnosing, evaluating, treating disorders mediated by VEGFR-3 activity, such as cancer and diseases of neovascularization.

Claim 22; Page 81; 149pp; English.

The present invention describes an isolated peptide (I) that binds to and

have cytostatic, hepatotropic, antiinflammatory, hypotensive, antidiabetic and vulnerary activities, and can be used in gene therapy. Compositions and methods from the present invention are useful for the call surface receptor VEGFR-3 such as cancer, e.g. brain, lung, liver, spleen, kidney, lymph node, small intestine, blood cells, opanicraes, colon, stomach, brast, endometrium, prostate, testicle, oxary, skin, head and neck, oesophagus, bone, marrow or blood, and diseases of neovascularisation, e.g. liver diseases, hypertension, post-trauma, chronic hepatitis, heamangiomas and diabetes. The present sequence represents a VEGFR-3 binding peptide, which is given in the exemplification of the present invention
inhibits vascular endothelial growth factor receptor 3 (VEGFR-3). (I)

The invention relates to a method for identifying a binding compound for C chemokine receptor 5 (CCR5). The method involves screening a library C C chess molecules (particularly peptides) with immobilised CCR5, and then identifying those molecules which bind. The invention also relates to cCR5-binding molecules identified using the method of the invention. The invention also relates to cCR5-binding molecules identified using for CCR5-binding peptides, a transfer vector encoding tagged CCR5, a computer-aided methods for determining the relative binding assay that utilises the three-dimensional structure of CCR5. Compounds identified using the methods of the invention are useful for treating or preventing HIV (human immunodeficiency virus) infection or AIDS (acquired immunodeficiency or antagonists of the invention may also be used to identify agonists or antagonists of the interaction of CCR5 sith its natural ligand, and to determine a binding motif for CCR5.                                                                                                 The invention relates to a composition comprising a polymer that forms a dydrogel at physiclogical temperature and a T20 or T1249 polypeptide release of a peptide, especially T20 or T1249 in the treatment of survivolument and peptide, especially T20 or T1249 in the treatment of Huban immunodeficiency virus) infections and, in the case of T1249, SIV commission immunodeficiency virus) infections and, in the case of T1249, SIV room temperature and can be administered easily but form hydrogels at room temperature. This allows the polypeptide to be released with improved pharmacokineit properties and bloavallability with increased half-life and reduced clearance rates. The present sequence is a generic enhancer peptide sequence with may be used in a fusion peptide (in either orientation) with T20 or T1249 to enhance the pharmacokinetic properties of the resultant hybrid peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
Composition for sustained delivery of e.g. a polypeptide including T20 or T1249 comprises a polymer which forms a hydrogel at physiological temperature and is useful for treating HIV infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Hiv infection, simian immunodeficiency virus; T20; T1249; AIDS; AGGULTEd immunodeficiency syndrome; SIV infection; Anti-HIV, virucide; Cytckine; reverse transcriptase inhibitor; viral mRNA capping inhibitor; hydrogel; enhancer peptide.

                                          The invention relates to a composition comprising a polymer that forms a devicable at physiological temperature and a T20 or T1249 polypeptide derivative. Administration of the composition is designed for sustained release of a peptide, especially T20 or T1249 in the treatment of HIV (human immunodeficiency virus) infections and, in the case of T1249, SIV (simian immunodeficiency virus) infection. The compositions are liquid at room temperature and can be administered easily but form hydrogels at physiological temperature. This allows the polypeptide to be released with improved pharmacokinetic properties and bloavailability with increased half-life and reduced clearance rates. The present sequence is a generic enhancer poptide sequence which may be used in a fusion peptide (in either orientation) with T20 or T1249 to enhance the pharmacokinetic properties of the resultant hybrid peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence is the consensus sequence of enhancer peptides which may be linked to a core polypeptide to form a novel hybrid polypeptide. The hybrid polypeptide exhibits enhanced pharmacokinetic properties relative to those exhibited by the core polypeptide when introduced into a living system. It is used to increase the in vitro or ex vivo half-life
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New hybrid polypeptide, useful for preventing, treating and diagnosing e.g. viral infections, comprises an enhancer peptide linked to a core polypeptide.
                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Retrovirus, gp 41; envelope protein; enhancer; antiviral; anti-HIV; virucide; hepatotropic; antiinflammatory; hybrid polypeptide; coiled-coil peptide interaction; fusion-related disorder;

of the core polypeptide. The hybrid and core polypeptides can be used for modulating fusogenic events and intracellular processes involving coiled-
coil peptide interactions. Other uses include preventing, treating and/or diagnosing disorders involving fusion events (e.g. modulation of neurotransmitter exchange and sperm-egg fusion), intracellular processes involving coiled-coil peptides (e.g. modulation) and viral infections that involve cell-cell and/or virus, respiratory syncytial infections caused by human immunodeficiency virus, respiratory syncytial infections caused by human immunodeficiency virus, respiratory syncytial virus. Epstein-Barr virus, hepatitis B virus, Mason-Pfizer virus and polio virus). The enhancer peptide sequence increases the half-life and reduces the clearance rate of therapeutic peptides, which increases their efficacy and minimises the incidence and severity of adverse side efficacy and minimises the incidence and severity of the diagnostic procedure in which they are used. (Updated on 06-AUG-2003 to correct OS field.) (Updated on 11-SEP-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Composition for sustained delivery of e.g. a polypeptide including T20 or T1249 comprises a polymer which forms a hydrogel at physiological temperature and is useful for treating HIV infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Hiv infection, simian immunodeficiency virus, T20, T1249, AIDS, AGGALTECH immunodeficiency syndrome, SIV infection, Anti-HIV, virucide, Cytokine, reverse transcriptase inhibitor; viral mRNA capping inhibitor; hydrogel; enhancer peptide.

                                                                                                                         The invention relates to a composition comprising a polymer that forms a dydroged at physhological temperature and a T20 or T1249 polypeptide derivative. Administration of the composition is designed for sustained release of a peptide, especially T20 or T1249 in the treatment of H1V (human immunodeficiency virus) infections and, in the case of T1249, SIV coom temperature and can be administered easily but form hydrogels at physiological temperature. This allows the polypeptide to be released with improved pharmacokinetic properties and bioavailability with increased half-life and reduced clearance rates. The present sequence is a generic enhancer peptide sequence which may be used in a fusion peptide (in either orientation) with 120 or T1249 to enhance the pharmacokinetic properties
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence is the consensus sequence of enhancer peptides which may be linked to a core polypeptide to form a novel hybrid polypeptide. The hybrid polypeptide exhibits enhanced pharmacokinetic properties relative to those exhibited by the core polypeptide when introduced into a living system. It is used to increase the in vitro or ex vivo half-life of the core polypeptides can be used for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       diagnosing
